Testimonial

My name is Bernie Witham and I am a rural fencing and yard building contractor based in Toogoloowah, South East Queensland. I only use red Ironbark timber for all my fencing and yard building projects. I have been trialling your new SupaCut drill bits since September 2011.

I have been using the 32, 19 and 12 mm drill bits. For all my split post fences, I use the 32mm drill bit for the holes for the heavy barbwire. I have drilled in excess of 4000 holes with the 32mm bit, and in this time I have only sharpened the bit twice.. What I like, is that the SupaCut bit does all the hard work. You do not have to push or force the bit whilst drilling the post.

I own two Tanaka 27S petrol driven drills which I find to be light, easy and powerful enough to drive the SupaCut 32mm bit. Also, I find that after drilling 60 posts the operator is less fatigued than if having used a non-SupaCut bit.

I use the 19mm bit for putting my gate hinges into 10" strainer posts and I find that it stays straight through the ironbark posts, cleans out well and drills very quickly. I use the 12mm for drilling holes for doing my Cobb & Cos in timber rails, and I have found it to be very good.
In my 27 years of fencing, I have found the bit to be up there with the best and recommend Supacut bits to any contractor who does not want to force their drill to get through a post.
